Vaughan's Calceolarias

These Make Wonderful Plants for Easter or Mother's Day

For Calceolarias, use a mixture of loam, leaf-mold and sharp sand. This mixture is suitable both for the seed pans and the pots into which the seedlings, when ready, should be planted. Perfect drainage is important. Calceolaria seed being very fine the seeding should be done with great care and it is suggested that one use a sheet of white paper on which a tablespoon of white sand is distributed. Then shake the seed on top of this sand and mix thoroughly. Then, sprinkle this mixture on the soil of the seed pan, dusting surface with a little fine sand, cover with a sheet of glass and place in the shade. For moisture, immerse the pans in water. As the seedlings come up lift them carefully when quite small and prick them off into a flat allowing two inches square for each plant. It is important that the leaves of one plant should never be allowed to overlap those of another or decay will probably result. When established in pots shift them into the larger size. At the last shift give them some manure water, not too strong, about once a week.

This new strain is distinguished by the golden yellow stamens—in the type they are dark. The flowers are produced in great profusion, are of the same size and color range as the Multiflora Nana. The golden yellow stamens make a wonderful contrast with the blues, reds and pinks of the flowers. We strongly recommend this variety.

Naegelia Hybrid Mixed

Naegelia is a genus of tropical American Gesneria-like plants closely related to Achimenes and is handled in much the same way, except that the varieties usually available in seeds do not have tuberous roots like those of Achimenes and the Gloxinias and therefore are handled somewhat differently during the dormant period. Although these plants may be propagated by means of offsets, they are so easily grown from seeds that most growers will likely favor the last named method. An excellent pot plant. Trade pkt., \$1.00.

PANSY VAUGHAN'S IMPROVED SWISS GIANT MIXTURE

Pansies—Continued.

Pansies have long been a favorite with us. We introduced the Swiss Giants to American gardens and named and introduced the lovely Canadian variety, Maple Leaf, several years ago.

Each year we make extensive tests of all pansies in our greenhouses in Western Springs. The plants are checked for trueness of color and type and the mixtures for balance of color harmony.

How to Sow Pansy Seeds. Sow the seeds in a cold frame in light soil without any fertilizer. Cover the seeds very lightly with the same soil and keep moist. Shade the seed bed with cheesecloth or a muslin screen, and as soon as all the plants are up remove the screen. Or you may sow them in a large pot or seed pan.

To be sure of fine, strong Pansy plants, we suggest the following, applied as a top-dressing by the end of March or early April.

2 parts dried blood. 2 parts steamed bone meal. 1 part potash

VAUGHAN'S LONG STEMMED WINTER-FLOWERING MIXED RESELECTED

It has a much wider color range than other Winter-Flowering strains and has an excellent stem length, averaging better than 10 in. The bloom size is from 2½ to 3 in. and the flowers are of very good substance and sweet scented. Sow in summer for Mid-winter blooming and give support early. One of our florist customers writes on March 27, '41.—"Your winter flowering pansies are one of our best paying crops." See illustration in color on back page. Trade pkt., \$1.00; ½ oz., \$2.00; ¼ oz., \$3.65.

VAUGHAN'S STUPENDOUS MIXTURE

Remarkable strain of gigantic proportions for greenhouse culture. The plants are veritable bushes, growing 4 ft. high. Carried on thick stiff stems 18 in. long are enormous flowers 4 to 4½ in. in diameter, and in a complete color range. Included are both multicolor blooms and selfs and among the latter are pure yellow. Pkt., 100 seeds, \$2.50.

GIANT MIXTURES

VAUGHAN'S IMPROVED SWISS GIANT MIXTURE

The flowers of this strain are of enormous size, 3 inches and over in diameter. They are perfectly round with overlapping petals, borne on strong stalks well above the remarkably luxuriant foliage. Thick petals, of a rich velvety texture, give this strain of pansy the required substance so necessary to a perfect pansy.

The superb colors and color combinations—salmons, yellows, pinks, rich reds and blues, are their distinctive feature. Excellent for greenhouse culture. Trade pkt., 50c; ½ oz., \$1.20; ¼ oz., \$2.20; oz., \$8.00; 2 oz., \$15.00.

VAUGHAN'S DWARF SUPER SWISS MIXED

Special selection of Geneva Giants of dwarf habit. Rich assortment of colors. Trade pkt., 50c; ½ oz., \$1.20; oz., \$8.00.

VAUGHAN'S SUPER SWISS GIANT MIXTURE

VAUGHAN'S MAPLE LEAF GIANT MIXED

VAUGHAN'S GIANT MIXTURE

Besides a good share of the "Fancy" strains such as Masterpiece, Swiss Giant, etc., this mixture contains all the self colors such as white, yellow, blue, purple, red, bronze, etc., and is probably the best "general" high grade mixture obtainable. All the flowers are of the "Giant" type. Trade pkt., 50c; ¼ oz., \$1.40; oz., \$5.00.

Riverside Strain. Recent improvements in this Baby Primrose class have made them indispensable for Florist's use. Seed sown in May or June will produce large plants for Christmas. September sown seed will produce nice plants for Easter and Mother's Day. This is the newest strain, flowers are larger, stems are heavier; foliage is stiffer, more upright and heavier. Flowers have more substance and last longer. About two weeks later in blooming. This type does not "crop" in and gives a longer period in which to sell plants.

Glory of Riverside Improved. A true rose pink, free bloomer with large flowers and robust grower.

Lilac Beauty. Pure light lilac, 100% even color when blooming and a delight to work in combinations.

New Giant. Large flower and later bloomer. Same color as Glory of Riverside.

Riverside Red Rose. A new introduction, a brilliant red rose of very even color from start to finish. See outside front cover for illustration in color.

White Giant. New. An exceptionally strong grower, large pure white flowers which may be used in combinations instead of Hyacinths.

Each of the above: 500 seeds, \$1.00; 2,000 seeds, \$3.00; 6,000 seeds, \$8.00.

New Giant Malacoides

Double Fairy Jewels. The color is a lovely rich rose pink, slightly deeper in the center than the outer or older petals. The strain comes 90% to 95% double from seed. Trade Packet (about 1,000 seeds), \$1.50.

Enchantress. A beautiful, soft salmon rose. The well rounded, beautifully formed flowers are $\frac{1}{8}$ to 1 inch in diameter and produced in unbelievable profusion. A well grown plant will have 50 or more heavy stemmed spikes. Trade Packet (about 1,000 seeds), \$1.50.

Snow Flake. Has flowers of the purest shimmering snow white one can imagine. Its beautifully formed 1-inch florets adorn the stately stems like glistening jewels sharply high-lighted by the lush green foliage. Trade Packet (about 1,000 seeds), \$1.00.

Mixture. Contains the two above single varieties, together with a good many others still in the developmental stage. Among these is a most delightful bicolor pink and white which will be ready for introduction as a separate variety within the next year or two. Trade Packet (about 1,000 seeds), \$1.00.

Seed of the spring-flowering type should be sown from Oct. to Feb. in the greenhouse for flowering for spring and summer flowers.

Saintpaulia Ionantha Grandiflora (African Violet)

The large dark-blue flowers which resemble violets, are produced very freely; plants having as many as 25 blossoms and more at one time are not unusual. The attractive small velvety leaves, which are almost stemless, form a neat cushion from which rise these attractive flowers. The plants can be kept in flower throughout the year, given only a short rest period by withholding water. Complete, detailed cultural instructions are sent with the seed.

Trade Pkt. \$1.00

Ionantha Cordata. Dark cordated leaves, strong growth and large flowers of a deep lavender color. Blooms in 6 months from seed, Trade pkt. \$1.00

SCHIZANTHUS Vaughan's Dwarf Masterpiece

Schizanthus

Use Schizanthus flowers in corsages. They are long lasting and make up very attractively.

VAUGHAN'S DWARF MASTERPIECE

This is to our knowledge the best strain of Schizanthus in existence. The plants grow dwarf and compact, making them most suitable for pot culture. The color range of the flowers, which are of good size, is the most varied, well-balanced from light pink to rose, very pleasing dark violet, all with conspicuous blotches. A splendid item for Mother's Day. Trade pkt., 50c; 1/16 oz., \$1.00.

Vaughan's Excelsior Hybrids. An extra select strain Trade pkt. Oz. with large flowers containing a perfect blend of colors for greenhouse culture. Makes a fine cut flower.

Suggestions for Sowing Seeds During the Summer Months

During the hot months of July and August fine seeds such as Calceolaria, Cineraria, Snapdragon, and finer perennial seeds, etc. should be sown in flats (as usual) and the flats placed in a cool basement until the seedlings sprout, when taken to greenhouse and some cheese cloth placed over them until the seedlings are of sufficient strength to have it removed.

Seeds of Biennials and Hardy Perennials

Perennials fill a large and interesting place in the operations of an up-to-date florist establishment. Some are as easily raised as annuals; quite a few may be forced; others make fine pot plants; and many furnish splendid cutting material. The rock garden requirements absorb all the low-growing varieties and the florist with his eye to the future will devote considerable space to perennials of all kinds. They require little heat, if any, and not much care.

SEED GERMINATES SLOWLY AND IRREGULARLY

of the following varieties and seed bed should be prepared where it will be undisturbed for a year or more.

LUPINUS POLYPHYLLUS RUSSELL

Russell Lupinus

A MARVELOUS SELECTION OF PERENNIAL LUPINS

Most unusual colors and color combinations; some flowers are self colors and many bicolors, the standard being of one color and the keel of another. The flowerettes are much larger than the other Polyphyllus varieties. The spikes are crowded with blossoms and resemble a closely set well rounded column of Sweet Peas. Useful as a cut flower.

The Russell Lupins have three virtues not including colour, that the older varieties lacked. Ability to travel well when cut, less tendency for the lower flowers to fade before the whole spike is out and excellent keeping qualities in the house.

Grown from originator stock seed. Trade pkt., 25c; oz., \$1.40; ¼ lb., \$4.80; lb., \$16.00.

Reselected seeds, originator's Green Seal packets: 20 seeds, 40c; 65 seeds, 90c, 120 seeds, \$1.60, Net.

Freesias CALIFORNIA GROWN

Thousands of FLORISTS are going to accept this solution of the problem which the TULIP SHORTAGE has presented. You know they will force. You know their flowers can be used in many ways.

Reports from those growers who planted a good supply of these bulbs at low prices have made good profits and are again booking their orders early in quantity.

Our Freesias bulbs are grown by specialists who know how to handle the stock from the time of planting until they are packed and shipped. Why take a chance of buying from such dealers that buy from growers who grow for "cut flowers" and do not give their bulbs the best of care in digging, curing and shipping.

White Calla

(Aethiopica) Ready in September

Callas being natives of swampy regions grow to best advantage where there is an abundance of moisture, and are therefore very difficult to handle in the curing. Some growers practice premature cutting off the tops, expose bulbs to the sun, in order to make early shipment.

Our stock is thoroughly cured in the ground and dried thoroughly before they are packed. This means later delivery but better results can be obtained from such bulbs.

We caution forcers of Callas to water this stock sparingly after planting because Calla bulbs store up considerable moisture.

Bulbs for Mid-Summer and Early Fall

RANUNCULUS

With available flowers for early spring sharply reduced by the effects of war, the problem of every greenhouse owner is: What shall I plant in the benches usually devoted to material shut off by war?

Ranunculus offer an immediate answer to this problem. No other flowers available to the florist can produce such a riot of color. They make an immediate hit with the public, as every flower show proves. Market records show that supplies in the past have sold out quickly at good prices, and next spring they will have far less competition.

The important thing is to grow a good strain, and Vaughan's exclusive Victoria Hybrids have no rivals in abundant bloom, percentage of doubles, strong stems, and size of flowers. The color range embraces pink, yellow, orange, brilliant scarlet, vivid apricot and innumerable tints of these colors.

Culture is simple, and full directions will be supplied on request.

Use Energized Rotogreen

for **MAXIMUM KILL,**
Without Harm to Plants

Most Highly Perfected Insecticide for Aphids,
Cyclamen Mite, Chrysanthemum Midge,
Red Spider, White Fly, Thrips.

OUR new formula contains three new factors giving increased kill of insects and eggs, and added repellent qualities.

It is not an experiment, but the result of thousands of experiments under actual greenhouse conditions. It corrects all the faults of which greenhouse men have complained in other sprays.

We recommend **ENERGIZED ROTOGREEN** for the successful control of Aphids, Cyclamen Mite, Chrysanthemum Midge, Red Spiders, White Fly, and Thrips. It does not injure delicate plants because it contains only mild vegetable oils.

Contains two new organic sulphurs (phenthioxin and dibenzyl disulphide) that increase the killing power of derris, and have good egg killing and repellent qualities. Contains thymol which helps inhibit the germination of fungi spores spread while spraying.

Contains a new ingredient which when combined with derris extract greatly increases kill. Spreader is mannitan monolaurate, made from cocoanut fats, not a soap, therefore works well in the hardest water. Tested and rigidly controlled

materials, 100% organic are used in its manufacture. Tested *regularly* in actual greenhouse spray tests.
